

TVG Bingo Challenge

- Challenge Period: July 13, 2019 to December 7, 2019
- Deadline for submitting proof: Wednesday, December 11, 2019, by 11:59 PM

This TVG challenge is related to cache attributes. Nearly all caches have attributes assigned to them to help communicate what to expect at a cache location. For this week's challenge we are looking for positive attributes only.

You must find a unique cache for each attribute earned. If a found cache has multiple attributes assigned, you must pick one attribute from that cache to earn the square on the card. There are three different levels of completion, based on how many rows, columns, and diagonals you have completed. Achieving the lowest level grants one entry in the drawing, with higher levels awarding more entries. The levels and number of entries are:

Bronze: One row, column, or diagonal (one entry)

Silver: Four rows, columns, or diagonals (two entries)

Gold: Twelve rows, columns, or diagonals (the entire card filled) (three entries)

A drawing will be held at the TVG Christmas Party in December from all qualifying entries.

Any type of cache may be used, but a cache may be used for only one attribute. Caches must be logged during the challenge period, and must be active (published and not archived) at the time that you log them.

Send your proof of completion to the TN Valley Geocachers account on the geocaching.com website by the deadline to earn your chances in the drawing! Include the following details in your email:

- Your geo-nickname
- Your real name
- The level for which you qualify
- Your qualifying caches with attributes claimed and dates found
